Atlas Minerals has fulfilled obligations under the Mined Land Reclamation Act of 1975 (Section 40-8, U.C.A., 1953, as amended), and will employ the following reclamation techniques on approximately 28.3 acres of unpatented mining claims and leased fee land.

- 1) Surficial soil material will be scraped off and stockpiled from all areas of planned surface disturbance.
- 2) Water retention ponds will be constructed to treat all mine water before being disposed of in accordance with applicable state and federal requirements.
- 3) Waste rock will be used to produce a low wide surface to be used for surface operations.
- 4) Mining and maintenance procedures will be conducted in a safe and orderly manner.

- 1) Extraneous debris, scrap, wood, and unuseable buildings will be removed from the surface.
- 2) One mine portal and one ventilation shaft will be sealed to prevent unauthorized or accidental entry.
- 3) All waste rock dumps will be regraded to a rounded naturally draining configuration.
- 4) All disturbed surfaces, excepting the access road, will be covered with stockpiled soil and seeded.
- 5) Water treatment ponds will be regraded, scarified, and seeded.
- 6) All replanted areas will be protected from grazing until vegetation is established.
- 7) Various soil amendments and/or surface manipulation will be used if found to be effective in revegetation test plots.

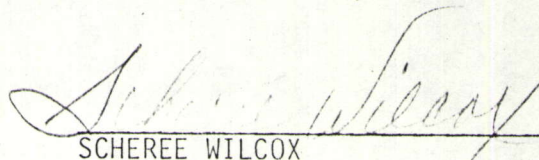

Reclamation performance surety will be established upon final approval of the reclamation plan.
